

unzip the requirements file from discord and drag it to
<directory_to_your_folder>, which is the “Churn” project folder on your laptop

open terminal via VS Code

create a virtual environment:
python -m venv <directory_to_your_folder>

if the above doesn't work, use:
python3 -m venv <directory_to_your_folder>

To activate, go to the virtual env file first, then:
cd <directory_to_your_folder>
source venv/bin/activate

If the above doesn't work, it's likely you don't have python installed.

Install:
pip install -r ./requirement.txt

verify a package:
pip show streamlit

to deactivate virtual env
deactivate

continue working with project or close VS Code
